

## FAST, COMFORTABLE AND SECURE DRIVING LICENCE VALIDATION

Move from A to B quickly, safely and comfortably. Especially in cities, new mobility concepts and the sharing economy are a real alternative to the purchase of your own vehicle. Reduce obstacles and offer your users a fast, secure and comfortable onboarding process with the cidaas ID Validator – now, nothing stands in the way and the user is ready for the ride.

### DRIVING LICENCE VERIFICATION ANYTIME AND ANYWHERE

The desire for more mobility requires the availability of vehicles everywhere and at all times. That means driver's licence verification must be just as flexible and possible anywhere. Onboarding must be mobile, convenient and quick at the moment the vehicle is needed. Driving licence verification using the cidaas ID validator can be carried out device-independently, from any camera-capable device. Using modern AI technologies, the automatic verification allows the user to complete a successful verification in a few seconds, without queuing.

## STRONG USER IDENTIFICATION

User identification is critical to protect the fleet from unauthorised access. On one hand, this includes verifying the driver's licence and checking its validity; on the other hand, it is substantial in this process to ensure that the user and the licence holder match. Onboarding therefore includes checking of the security features of the driving licence as well as liveness detection and biometric matching of the passport photo with the person.

## COST-OPTIMISED DRIVING LICENCE VERIFICATION

Save noticeably on process costs. A call centre is no longer up to date. Waiting times are tough for users, the call centre is sometimes only available at certain times and the costs per identification case are unsustainable.

In addition to low-cost identification, the entire process flow becomes more efficient because the data obtained from the analysis is immediately made available to the right systems. In our own certified data centres, the highest security and availability of the system is ensured without any worries on your part.
